

Whether you audit your own organization or other companies, Audit Master is the perfect system for creating and managing your audits and surveillances. Audit Master allows you to detail an audit's scope, establish auditing frequency, and log requirements and responsibilities for conducting audits in accordance with industry standards.

Identify Areas for Improvement

When your organization takes a "continuous improvement" approach, process design and profitability benefit immediately from audit findings. Audit Master yields performance details for managers and their teams to focus on the areas that need to be addressed.

Correct Problem Areas

Audits allow you to evaluate findings so that your team can focus on both immediate and long-term fixes for the problems that have been uncovered. An effective audit covers all aspects of the inspected process, reports on unsatisfactory elements, and generates both corrective actions and follow-up reviews to ensure problem resolution.

Ensure Procedural Compliance

An effective auditing process examines the use of documentation on the job to determine if team members are using approved documents, and if they are using them correctly.

Create Historical Data

Project managers will tell you, "The biggest problem is that we don't know where errors were made in the past." Auditors will tell you, "Read the audit!" The historic data provided by an effective auditing process archives audit results and findings, and it allows teams to learn and improve from past experience.

Streamline Audit Scheduling

Whether performing a one-time audit, an annual procedure, or a recurring audit driven by a business process, Audit Master streamlines your audit scheduling and allows you to effectively assign and notify team members of their responsibility.

Document Corrective Actions

Findings generated by your auditors often languish while awaiting action, especially when managed in a paper-based program. Audit Master improves responsiveness by creating an automated process that links findings to corrective actions.

Highlight Problem Areas

Audit Master allows your auditors to execute the surveillance process so that it focuses on those areas that traditionally experience problems, or have had audit issues in the past.

Support Management Review

Audits are an essential tool in the execution of any control program. They provide a detailed review of each process element, allowing your team to evaluate current performance and to scrutinize previously identified problem areas.

GET AUDIT MASTER

HARRINGTON GROUP

Harrington Group Desktop Products

The Harrington Group is a recognized leader in quality management software. Our applications are used to meet the day-to-day demands of managing quality processes and solving real problems.

Audit Master

Plan and conduct quality system compliance audits with Audit Master, which includes a built-in corrective action system for handling the audit findings.

C/A 6

Manage corrective actions on a desktop or in a networked environment by categorizing issues, assigning responsibility for them, and tracking corrective activities.

Calibration Recall

Meet the calibration requirements of your quality system with the added benefit of a complete tool inventory and history.

Document Control

Track, organize, and manage any type of documentation. You can manage documents that are physically or electronically issued.

Maintenance Log Pro

Schedule and record equipment maintenance activity to forecast downtime, extend service life, and avoid warranty violations.

Training Manager

Track the complete training history of each employee to ensure that personnel are competent and qualified for their roles.

ESTABLISHED in 1991, Harrington Group has a history of focusing on quality and has developed a comprehensive set of management and technical processes based on ISO 9001:2000. The consistency achieved throughout the application of these processes provides the foundation for predictable performance and a reputation for delivering high quality products, on time and within budget.

In addition to our extensive product suite, Harrington Group offers a complete line of services to help any organization establish or improve its quality management operations. Contact us today for help with any aspect of your quality management system.
