- Password protection
- Advanced reporting
- Sophisticated sorts and filters
- Fast and specific searching
- User Workgroups
- Straightforward setup and use

Inventory Equipment

The equipment that comprises your production infrastructure is as important as that used to accept your product. To ensure uniform results, it is important to identify and document details about each piece of equipment.

Extend Service Life

By adhering to the equipment manufacturer's recommendations, you can avoid warranty violations and maximize service life.

Forecast Downtime

All equipment requires maintenance or inspection at some point. Through a carefully planned program, you can forecast downtime to minimize the impact on your production.

Maintain Records

Maintenance Log Pro provides ample space to document nearly anything about each piece of equipment. As equipment is serviced, inspection findings can be easily recorded.

Work Orders

Print work orders that identify required actions and include plenty of room for technician comments. These documents become part of the documentation set through the lifetime of your equipment. You can even attach a maintenance procedure to the work order record.

Get it Done Fast

With rapid-entry data screens, quickly locate the correct equipment record and easily document nearly anything about the equipment or maintenance activity performed.

Generate Reports

Produce reports that identify scheduled maintenance for a particular item or equipment at a specific location. Instantly print out the complete maintenance history for any piece of equipment. Reports are also provided to help you determine trends of maintenance problems across part families.

Schedule Recurring Maintenance

Define a maintenance activity (work order) then schedule it to occur at prescribed intervals. You can also create unplanned work orders.

Harrington Group Desktop Products

The Harrington Group is a recognized leader in quality management software. Our applications are used to meet the day-to-day demands of managing quality processes and solving real problems.

Audit Master

Plan and conduct quality system compliance audits with Audit Master, which includes a built-in corrective action system for handling the audit findings.

C/A 6

Manage corrective actions on a desktop or in a networked environment by categorizing issues, assigning responsibility for them, and tracking corrective activities.

Calibration Recall

Meet the calibration requirements of your quality system with the added benefit of a complete tool inventory and history.

Document Control

Track, organize, and manage any type of documentation. You can manage documents that are physically or electronically issued.

Maintenance Log Pro

Schedule and record equipment maintenance activity to forecast downtime, extend service life, and avoid warranty violations.

Training Manager

Track the complete training history of each employee to ensure that personnel are competent and qualified for their roles.

ESTABLISHED in 1991, Harrington Group has a history of focusing on quality and has developed a comprehensive set of management and technical processes based on ISO 9001:2000. The consistency achieved throughout the application of these processes provides the foundation for predictable performance and a reputation for delivering high quality products, on time and within budget.

In addition to our extensive product suite, Harrington Group offers a complete line of services to help any organization establish or improve its quality management operations. Contact us today for help with any aspect of your quality management system.
